| Sandard | Units of length measure height, <br> width, length, depth, and distance. <br> Units of standard length include <br> inches, feet, yards, and miles. |
| :---: | :--- |
| find | An inch is a standard unit of meas- <br> urement. An inch is 1/12 of a foot, <br> and may have originally referred to <br> the length between the tip of the <br> thumb and the first joint (knuckle). |
| yard | A foot is a standard unit of measure- <br> ment. It is 12 inches long. It <br> may have originally referred to the <br> length of a man's foot. It is <br> abbreviated "ft". |
| abile | A yard is a unit of measurement <br> used in several different measure- <br> ment systems, including imperial <br> and standard. It is equal to three <br> feet, or 36 inches. It is abbreviated <br> "yd". |
| A mile is a unit of measurement |  |
| used to measure longer distances. It |  |
| is equal to 5,280 feet. The word |  |
| "mile" comes from the Latin mille |  |
| passus, which means "a thousand |  |
| paces". |  |

Instructions: Print on cardstock, choosing either page 2 or 3 for metric (see pages 2 and 3 for details). Laminate and cut cards apart.

When you present this work, it's nice to show the kids a ruler with standard measurements, so they can see for themselves how long these unit lengths are. Maps can be used to show miles.

| Units of length measure height, |
| :--- | :--- |
| width, length, depth, and distance. |
| Units of metric length include |
| millimetres, centimetres, metres, |
| and kilometres as its primary units of |
| measurement. |

These cards are intended to be used in countries where the "re" spelling at the end of metric lengths is commonly used ("kilometre"). I have included the alternate spelling on the cards in parentheses because it's good for kids to know that the words can be spelled differently.
